

## MEDIA RELEASE

### Utility contractor Trans Power joins OEC Group of Companies

*Construction leader to expand OEC's design-build infrastructure solutions*

#### For Immediate Release

September 8, 2021

Toronto, Canada—OEC announced that it has completed the acquisition of construction firm Trans Power Utility Contractors Inc., a best-in-class provider of electrical and associated utility distribution infrastructure construction services. The acquisition provides OEC with enhanced design-build capabilities as the group expands its position in the infrastructure and energy services industry.

Rob Lister, President and Chief Executive Office, OEC shared, “Trans Power’s industry-leading services will bolster our design-build project delivery capabilities as we deliver increased value to clients. Together, we will be better positioned to support the increasing demand for infrastructure renewal, electrical power and gas distribution network reliability and the expansion of 5G connectivity. We’re excited to welcome Trans Power to OEC.”

Founded in 1990, Trans Power is one of the largest utility distribution construction firms in Ontario, specializing in the installation of underground and overhead high voltage cables, transformers, switchgears, lighting traffic signals and telecommunication. Trans Power’s key services are comprised of construction, project management and capital works, as well as engineering and design-build project delivery. Trans Power serves a full spectrum of customers across both new construction and repair, as well as rehabilitation projects within the electrical and gas distribution, and telecommunications end-markets.

Frank Mongillo, President and CEO, Trans Power added, “Joining the OEC group of companies will allow us to draw upon our successful track record while maintaining our focus on delivering continued customer service excellence to our clients. We’re excited to be entering this new chapter with OEC as we share similar cultures and values, with safety as our top priority. This step forward will create new opportunities for our people and greater solutions for our clients.”

The addition of Trans Power is consistent with OEC’s strategy of building scale in infrastructure and energy services.
